## RESIDUAL CURRENT CIRCUIT BREAKERS OFE (6 kA)

- They react to sine-wave residual current (type AC).
- For protection:
- against dangerous contact with live parts ( $\left.\mathrm{I}_{\mathrm{Ln}} \leq 30 \mathrm{~mA}\right)$
- against dangerous contact with dead parts
- against fire or short-circuit in reduced insulation capacity of electrical equipment ( $\mathrm{Lan} \leq 300 \mathrm{~mA}$ )
- Possibility of additional mounting of auxiliary switches PS-OF-1100 on the right side of the device.
- Surge current resistance up to $1 \mathrm{kA}(8 / 20 \mu \mathrm{~s})$.
- Possibility of interconnection with circuit breakers LPE (LPN) by means of interconnecting busbars.
- N -pole of residual current circuit breakers in switching on it closes before and in switching off it opens after the other poles.

Residual current circuit breakers, 2-pole, type AC

- Standard type for common use in building and housing installations up to $40 \mathrm{~A}, 230 \mathrm{~V}$ a.c.

${ }^{3)}$ Rated conditional short-circuit current relates to short-circuit protection. It is also possible to protect residual current circuit breakers against overload by circuit breaker and fuse-link. In this case $I_{n}$ of $M C B$ has to be equal or lower than $I_{n}$ of $R C C B\left(I_{n M C B} \leq I_{n R C B}\right)$ a $I_{n}$ and $\ln$ of fuse-link has to be by one degree lower than $I_{n}$ of $R C C B\left(I_{\text {n of fuse-link by one degree lower }} \leq I_{n R C B}\right)$
