${ }^{*}$ ) It is only available for version X3.

MMR-HL

## LEVEL RELAYS MMR-HL

## Level relays MMR-HL

- For control of maximum or minimum level of a conductive liquid in a tank.
- High rated current 16 A .
- They can be used for liquid filling (function UP) or drawing off (function DOWN). If the tank is from a conductive material, it can be used instead of GND probe.
- Alternating current is used for measuring to eliminate electrolysis of the liquid and oxidation of probes. Working voltage in the measuring loop is 12 V .
- Light indication of presence of supply voltage (green LED).
- Maximum distance of electrodes is 100 m with the set sensitivity of $100 \%$. If sensitivity is decreased, it is possible to extend the maximum length up to 1000 m . This is true with cable capacity up to $100 \mathrm{nF} / \mathrm{km}$. In both cases it is necessary to exclude parallel run with power cables (the distance shall be at least 20 cm between the cables).
- After connection of the relay, we recommend setting the sensitivity (knob SENSITIVITY) to maximum. If the yellow LED is blinking, there is not sufficient signal-to-noise ratio, and it is necessary to decrease sensitivity (by turning the SENSITIVITY knob to the left) until the LED stops blinking.
- If the LED is blinking even at minimum sensitivity, the correct functionality is not guaranteed. In such as it is necessary to take measure to reduce noise (other cable, placing the relay closer to the monitored place, etc.). If the LED is not blinking, the relay is ready to work.
- It is suitable to check the signal-to-noise ratio regularly. In worsening of conditions (noise increase) the yellow LED will begin blinking.
- The probes are not included in the delivery.
- Functional even at temperature $-20^{\circ} \mathrm{C}$.

## LEVEL RELAYS MMR-HL

## Description

## Terminals $L$ and $N$ for connection of supply voltage

- $U_{c}: A C 230 \mathrm{~V}$.

## Indication of presence of supply voltage

- Supply voltage presence is indicated by continuously lighting green LED.

Indication of signal-to-noise ratio or relay closing

- Yellow LED.
- Insufficient signal-to-noise ratio - blinking.
- Relay closed - lights.

Diagram
MMR-HL-...

Wiring diagram

## Graph

Function Up = adds liquid

## Function DOWN = removes liquid
