Function	- overvoltage - undervoltage - phase failure - phase sequence ^{*)} - asymmetry ^{*)}	- indication at reach of: 0.1 ÷ 1 A 0.5 ÷ 5 A 2.5 ÷ 25 A (adjustable)	- indication at reach of: 0.03 ÷ 30 A (adjustable)	- liquid drawing off - liquid filling	- motor protection - local reset - remote reset - auto reset	- from -25 °C - up to +95 °C - 2 channels

^{*)} It is only available for version X3.

CURRENT MONITORING RELAYS MMR-P

MMR-P1-001-A230

Current monitoring relay

- For monitoring the value of current passing through the measured circuit.
- For short-time load disconnection at increase of monitored current above the set value.
- Suitable for disconnection of the heating spiral of electric boiler at start of appliance with higher power to avoid switching off the main breaker in the house.
- Range of the monitored current depending on version: 0.1 ÷ 1 A; 0.5 ÷ 5 A; 2.5 ÷ 25 A
- Adjustable delay of disconnection 0 ÷ 15 min.
- The relay is equipped with an output make-and-break contact 16 A.
- Light indication of presence of supply voltage (green LED).
- Light indication at closing of contacts 15-18 (yellow LED).

¹⁾ Each digit indicates successively the number of make and break contacts.

²⁾ The relay enables measurement of only alternating currents.

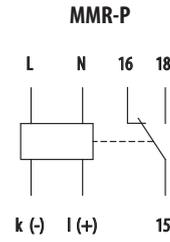

³⁾ Setting the values by trimmers may cause impression of wrong setting. Regulation elements have certain tolerance. Trimmer path is notionally divided into several sections so the deducted value of trimmer resistance defines the given section, the set value. In spite of accurate setting of regulation element to desired value the different time setting may occur. This may happen especially when setting values at the beginning of time range. In such cases it is necessary to find the required value by turning the regulation element to the left or right.

Connection examples

- Example of blocking of current taking by electrical heating:**
 Switching on the instantaneous water heater (priority appliance) will cause momentary exceeding of the guaranteed switched current of the priority current relay and opens contact. Coil of RSI contactor loses voltage and opens power contacts so that it disconnects electrical heating and reduces total current consumption.
